Functional matrix support

- Ops & Supply Chain, HR, Finance, Service, QA/RA

Why did we partner with Ops & Supply Chain?

Things are changing!

- Historically, had many smaller, regional channel partners with limited systems capabilities and virtually no supply chain initiatives or expertise. Functionally, Sales was the only contact with channel partners.
- Roll-up within the medical distribution industry has changed things:
 - Acute Care: 2 dominate national distributors, 1 fast growing national distributor, and a few regional's.
 - Physician: 4 national distributors, and still many regional's.
- Supply Chain executives now in place with many distributors and expectations are changing.

“Big 5” Team Approach

- ✓ National channel partners require , and benefit from, multi-functional support and relationships.
 - Sales Management
 - Marketing
 - Supply Chain
 - Customer Service

We all work together, with close communications, to build our business and relationships across all functions.

Business Development Partnership

- ✓ 2010 acquisition and integration was lead by Operations and Sales.
 - Close collaboration on building the financial model, go to market strategies, and integration plans.

Regional Strat Planning Leadership Team

- ✓ US/C Regional leadership team, consisting of functional leads which includes Supply Chain, meets regularly to review results, progress and discuss changes to the strategies we have identified for our success.

So, is there a future for Operations/Supply Chain and Sales to continue to work together?

Absolutely!

- ✓ Channel is continuing to change, “Walmart model” may not be far away?
- ✓ Increasing global competition, combined with the global supply chain, creates challenges/opportunities for all of us.
- ✓ Pressures on margins mean we all have to work together to find solutions.

Q & A?
